Script-Controlled ACL – Project Planning Logic

A **Sprint** is a fixed period or duration in which a team works to complete a set of tasks.

An **Epic** is a big task or project that is too large to complete in one sprint. It is broken down into smaller tasks (stories) that can be completed over multiple sprints.

A **Story** is a small task. It is part of an Epic.

A **Story Point** is a number that represents how much effort a story takes to complete (usually in the form of the Fibonacci series).

1 – Very Easy task

2 – Normal task

3 – Moderate task

5 – Difficult task

Story points used: 1, 2, 3, 5

Sprint 1

User & Role Management (Epic 1)

- Creating the EEE User (USN1) **2**
- Creating roles bb1–bb4 and assigning them to the EEE User (USN2) **3**

Custom Table Setup (Epic 2)

- Creating the Institution Details table and fields (USN3) **3**
- Creating sample records for ECE, EEE and CSE branches (USN4) **2**

Total Story Point in Sprint 1 = 2 + 3 + 3 + 2 = 10

Sprint 2

Access Control (ACL) Configuration (Epic 3)

- Creating the READ ACL – role bb1, Branch is EEE, advanced script (USN5) **5**
- Creating the CREATE ACL – role bb2 (USN6) **2**
- Creating the WRITE ACL – role bb3 (USN7) **2**
- Creating the DELETE ACL – role bb4 (USN8) **2**

Validation & Testing (Epic 4)

- Impersonation testing of read access – EEE User, no-role user, admin (USN9) **2**
- Testing create, edit and delete operations (USN10) **2**

Total Story Point in Sprint 2 = 5 + 2 + 2 + 2 + 2 + 2 = 15

Total Story Points

Sprint 1 = 10

Sprint 2 = 15

Velocity = Total Story Points Completed / Number of Sprints

Total Story Points = 10 + 15 = 25

No. of Sprints = 2

Velocity = 25 / 2 = **12.5 (Story Points per Sprint)**

Your team's velocity is 12.5 Story Points per Sprint.
