SCRIPT-CONTROLLED ACL – RESTRICT RECORD ACCESS BASED ON FIELD VALUE

User Acceptance Testing (UAT) – Script-Controlled ACL

Date:	October 3, 2026	**Maximum Marks:**	4 Marks
Team ID:	SWTID-2026-8089	**Project Name:**	Script-Controlled ACL

Project Overview:

Project Name: Script-Controlled ACL – Restrict Record Access Based on Field Value

Project Description: Implement script-controlled Access Control Lists (ACLs) in ServiceNow so that only users holding the required role can view, create, edit or delete records of the Institution Details table, and only EEE branch records are visible to bb1 users, while administrators retain full access.

Project Version: 1.0

Testing Period: 03 October 2026

Testing Scope:

- User and role setup (EEE User, roles bb1, bb2, bb3, bb4)
- Institution Details table (u_institution_details) and sample records
- READ ACL with role, data condition (Branch is EEE) and advanced script
- CREATE (bb2), WRITE (bb3) and DELETE (bb4) ACLs
- Verification through impersonation (EEE User, user without roles, administrator)
- A user with the bb1 role should see only EEE branch records.
- A user without the roles should not see any records.
- An administrator should see all records regardless of branch.

Testing Environment:

URL/Location: ServiceNow instance used for the project implementation and testing.

Credentials (if required): Accessed through an authorized ServiceNow account. Credentials are intentionally not recorded in project documentation.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Verify EEE User and custom roles	1. Open User Administration → Users. 2. Open the EEE User. 3. Check the Roles tab for bb1, bb2, bb3, bb4.	The EEE User exists and the roles bb1–bb4 are assigned.	The EEE User was created and all four roles were assigned.	**PASS**
TC-002	Verify Institution Details table and records	1. Open System Definition → Tables. 2. Open u_institution_details. 3. Check the fields and the sample records.	The table contains the required fields and records for ECE, EEE and CSE branches.	The table, the Branch choice field and the sample records were verified.	**PASS**

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-003	Verify READ ACL configuration	1. Elevate to security_admin. 2. Open Access Control (ACL). 3. Open the read ACL for u_institution_details.	The ACL requires role bb1, has the data condition Branch is EEE and uses the advanced script.	The READ ACL configuration was verified.	**PASS**
TC-004	EEE User (bb1) views records	1. Impersonate the EEE User. 2. Open u_institution_details.list.	Only EEE branch records are displayed.	Only the EEE branch record was displayed.	**PASS**
TC-005	Negative scenario – user without roles	1. Impersonate a user without bb1–bb4. 2. Open u_institution_details.list.	No records are visible and access is denied.	Access was denied; security constraints prevented access.	**PASS**
TC-006	Administrator views all records	1. Impersonate / log in as Admin. 2. Open u_institution_details.list.	All records (ECE, EEE, CSE) are displayed.	All branch records were displayed.	**PASS**
TC-007	Verify CREATE ACL (bb2)	1. Create the create ACL with role bb2. 2. Impersonate the EEE User. 3. Check the list for the New button.	A user with bb2 can create records (New button available).	The create ACL was configured and the New button was available.	**PASS**
TC-008	Verify WRITE ACL (bb3)	1. Create the write ACL with role bb3. 2. Edit the Description of an EEE record.	A user with bb3 can edit the record.	The Description was updated to 'ACL is Executed'.	**PASS**
TC-009	Verify DELETE ACL (bb4)	1. Create the delete ACL with role bb4. 2. Select an EEE record and choose Delete. 3. Confirm.	A user with bb4 can delete the record.	The selected EEE record was deleted after confirmation.	**PASS**
TC-010	ACL enforcement in Service Portal	1. Open the Institution Details data through the Service Portal. 2. Check the visible records for each user.	ACL restrictions are applied in the Service Portal.	Not executed as part of the recorded implementation procedure; requires separate execution.	**NOT TESTED**

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No defect recorded during the documented execution path.	Not applicable.	N/A	Closed / No defect observed	The recorded implementation successfully enforced the READ, CREATE, WRITE and DELETE ACLs. Service Portal testing is listed separately as not tested.

Sign-off:

Date: 03 October 2026

Notes:

- Positive and negative access scenarios are documented above. The Service Portal scenario is explicitly marked NOT TESTED because execution evidence is not available.
- Tester feedback can be added after final review of the ServiceNow instance.
- No defect was recorded in the documented execution path.
- Complete the tester/project manager/product owner sign-off according to the team's SkillWallet process.
